## **What our customers say:**

### **BRIAN & KYLE - CAVE CREEK, AZ**

We had a concept we liked but found most contractors either had a “one-size-fits-all” mind set or were cost-prohibitive. We were introduced to USCI, showed them our sketch which was a literal cocktail napkin! Their immediate response was ‘We can do! It will be a fun project!’ They offered a few additional options we’d not considered, and before we knew it a thought became reality! Easy, stress free, fun and amazing.”

### **RICH & LINDA - GLENDALE, AZ**

“Their ability is exceptional! We initially just wanted our gates replaced like kind, but the finished gates were beyond expectation. We asked about building a gazebo and BBQ area, what we got was extraordinary! These guys talent, skill and creativity transformed our backyard into an amazing space where we like to spend all of our time.

### **RAYMOND - TAMPA, FL**

We are a national contractor specializing in commercial property remodeling and construction. One of our large national clients has a distribution center in Mesa, Arizona, and they had two 30ft-wide by 8ft-tall yard gates that were completely destroyed during a monsoon.

Upon being introduced to USCI their experience became immediately apparent. Easy to work with, extremely responsive, on schedule and very creative with a design that was secure, stylish and more monsoon resistant. Will definitely be calling USCI for all our Arizona projects.

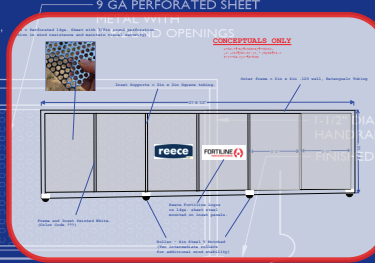

# WHO WE ARE...

US Civil & Industrial was born out of the Heavy Civil Construction industry. Owners Craig and Eric together have over 50 years' experience building America's infrastructure (roads, airports, wind farms, water and sewer systems) This allowed them to sharpen their skills with concrete, metal fabrication, woodworking, electrical, project design and management. Several years ago they decided it was time to create an organization that would allow them to share their skills and experience.

We are very proud that USCI is a self performance company. Every project regardless of size or complexity, is taken from original concept, through design, fabrication and installation to your 100% satisfaction.
